

22/6/23

Title - Packet tracing using Router as the connection device.

a) Aim - Configuring default route, static route to the router.

Topology -

Procedure -

- 1) Select a generic router and two PC as end devices and connect them with copper cross-wire.
- 2) Set the IP addresses of the PCs with different network IDs.
- 3) Set gateway in the settings for the two PCs
- 4) Now, we need to connect router networks with PC gateways.
- 5) To set network in CLI of router, follow the following steps -
No → Enable → Config t
→ interface FastEthernet0/0
→ ip address 10.0.0.10 - 255.0.0.0
→ No shut → Exit
- a) Follow the same steps for other PC.
- 7) To confirm connection, give `show ip route` command.

8) Now, in command prompt of PC0 ping the second PC PC1.

Result -

ping 20.0.0.2

pinging 20.0.0.2 with 32 bytes of data:

Request timed out

Reply from 20.0.0.2: bytes=32 time=0 ms TTL=128

Reply from 20.0.0.2: bytes=32 time=0 ms TTL=128

Reply from 20.0.0.2: bytes=32 time=0 ms TTL=128

Ping statistics for 20.0.0.2:

Packets: Sent=4, Received=3, Lost=1

Approximate round trip times in milli-seconds:

Minimum=0 ms, Maximum=0 ms, Average=0 ms

Diagram illustrating a network topology with three routers (Router1, Router2, Router3) and two PCs (PC0, PC1).

- Router1** is connected to **Router2** (20.0.0.10 to 20.0.0.20) and **Router3** (10.0.0.10 to 30.0.0.20).
- Router2** is connected to **Router3** (30.0.0.10 to 30.0.0.20).
- Router1** is connected to **PC0** (10.0.0.10 to 10.0.0.1).
- Router3** is connected to **PC1** (40.0.0.10 to 40.0.0.1).
- The connection between **Router2** and **Router3** is labeled "serial cable" and "copper cross-over".

Procedure -

- 1) Select 2 generic routers and two PC's as end devices. Connect the PC's to different routers with copper cross over and connect both routers to main router with serial cables.
- 2) Set the IP addresses of PC and gateways.
- 3) Set the gateway addresses in all the routers taking interface as fastethernet for the PCs and serial for routers.
- 4) Now, connect the interfaces from other routers with following steps:-
config t → ip route 30.0.0.0 255.0.0.0 20.0.0.20
ip route 40.0.0.0 255.0.0.0 20.0.0.20
- 5) Similarly, connect the other PC to interfaces.
- 6) Check the network connections with show ip route command.

7) Now ping 40.0.0.1 from 10.0.0.1

Result - from 10.0.0.1

ping 40.0.0.1

pinging 40.0.0.1 with 32 bytes:

Request timed out

Reply from 40.0.0.1: bytes=32 time=0 ms TTL=127

Reply from 40.0.0.1: bytes=32 time=0 ms TTL=127

Reply from 40.0.0.1: bytes=32 time=0 ms TTL=127

Ping statistics for 40.0.0.2:

Packets: Sent = 4, Received = 3, Lost = 1

Approximate round trip time in milli-seconds:

Minimum = 0 ms, Maximum = 0 ms, Average = 0 ms

Incomplete
show IP
route

(a/p)

Config-steps =

>enable

config t

interface fastEthernet 0/0

IP address 10.0.0.10 255.0.0.0

no shut

exit

interface serial 2/0

IP address 20.0.0.10 255.0.0.0

no shut

exit

Show IP route
similarly for router 1

>enable

```
# config t
# interface serial 2/0
# IP address 20.0.0.20 255.0.0.0
# no shut
# exit
```

```
# interface serial 3/0
# IP address 30.0.0.10 255.0.0.0
# no shut
# exit
```

similarly for router-2
> enable

```
# config t
# interface serial 2/0
# IP address 30.0.0.20 255.0.0.0
# no shut
# exit
```

```
# interface fastethernet 0/0
# IP address 40.0.0.10 255.0.0.0
# no shut
# exit
```

show IP route

now select PC0 end device

desktop → command prompt

PC> ping 40.0.0.1

will be unable to ping to interfere configuration
→ CLI

```
# config t
# IP route 30.0.0.0 255.0.0.0 20.0.0.20
# IP route 40.0.0.0 255.0.0.0 20.0.0.20
# exit
show IP route
```

similarly for Router-1

```
# config t
```

```
# IP route 10.0.0.0 255.0.0.0 20.0.0.10
```

```
# IP route 40.0.0.0 255.0.0.0 30.0.0.20
```

```
# exit
```

```
show IP route
```

similarly for Router-2

```
# config t
```

```
# IP route 10.0.0.0 255.0.0.0 30.0.0.10
```

```
# IP route 20.0.0.0 255.0.0.0 30.0.0.10
```

```
# exit
```

IP Route

for router-0

```
show IP route
```
